RELIABLE MULTI-CRAFT SERVICES FOR INDUSTRIAL FACILITIES

Proven by Performance

SERVICES

Performance Insulation Contractors (PIC) supports operating facilities and complex projects with experienced crews, disciplined planning, and a safety-first approach. From insulation and heat management to scaffolding, coatings, steam tracing, electrical heat tracing, and fireproofing, we provide multi-craft services that keep projects moving and minimize downtime.

ACCESS & SURFACE PREPARATION

Scaffolding - Purpose-built access for job sites where safety and schedule are non-negotiable. Safety components installed and platforms inspected and tagged per OSHA guidelines following erection.

Industrial Paint and Coatings - Tank, field, tower, and pipe coatings for structural steel, process equipment, and piping systems to support corrosion protection and long-term performance. Surface prep includes abrasive blasting and containment, overseen by a NACE/AMPP-certified coatings manager.

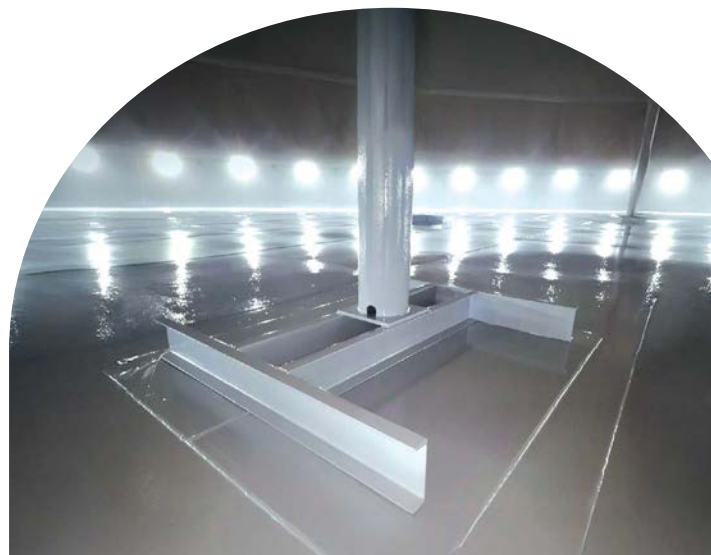

INSULATION SYSTEMS

Thermal /Acoustical Insulation - Field-installed insulation that supports thermal control, equipment protection, and noise attenuation requirements across operating facilities. Piping, equipment, tanks, and vessels for maintenance, turnarounds, and new construction.

Cryogenic Insulation - Specialized insulation systems installed to manage extreme low-temperature environments while maintaining process stability, efficiency, and protecting assets.

Removable Insulation Blankets - Custom-fit blankets built for repeat removal and reinstallation without compromising performance. Built to spec for valves, turbines, vessel heads, heaters, and more, using hog-ring or sewn construction methods with closure and cutout options available.

HEAT MANAGEMENT

Steam Tracing - Steam tracing installed to maintain temperature and protect critical lines as conditions shift. . Proven experience with copper and stainless heat trace tubing on piping, valves, tanks, and vessels.

Electric Heat Tracing - Electric heat tracing installed with controlled routing, terminations, and jobsite oversight. Supports reliable temperature maintenance on piping and equipment.

PASSIVE FIRE PROTECTION

Fireproofing - Cementitious lightweight fireproofing applied to meet project requirements for passive fire protection. Can support 1 to 4 hour fire protection depending on thickness and application requirements. Applied to vessel skirts and structural supports in either contour, or blocked styles, in accordance with customer supplied specifications.

WHY PIC?

Experience That Shows Up In The Field

- Teams built for high-pressure job sites, with the planning needed to keep scopes moving.

Quality You Can Verify -

Spec-driven, master craftsmanship and consistent follow-through from mobilization through project completion.

Reliable Execution Across Scopes

- Multi-craft services delivered with practical interface management to reduce handoff risk.

Safety-First, Site-Ready Teams

- Safety-educated, experienced crews who work within site programs and maintain consistent execution across active job sites.
